

REACT COMMAND

# INSTALATION STEP

## 1

- go to directory where you want to create react project and open cmd
- to open cmd in path search cut all and only type cmd

```
C:\Windows\system32\cmd.exe
Microsoft Windows [Version 6.0.6002]
Copyright (c) 2006 Microsoft Corporation. Med ensamrätt.

C:\Users\>adb start-server
* daemon not running. starting it now on port 5037 *
* daemon started successfully *

C:\Users\>
```

## INSTALATION STEP 2

```
npx create-react-app  
test
```

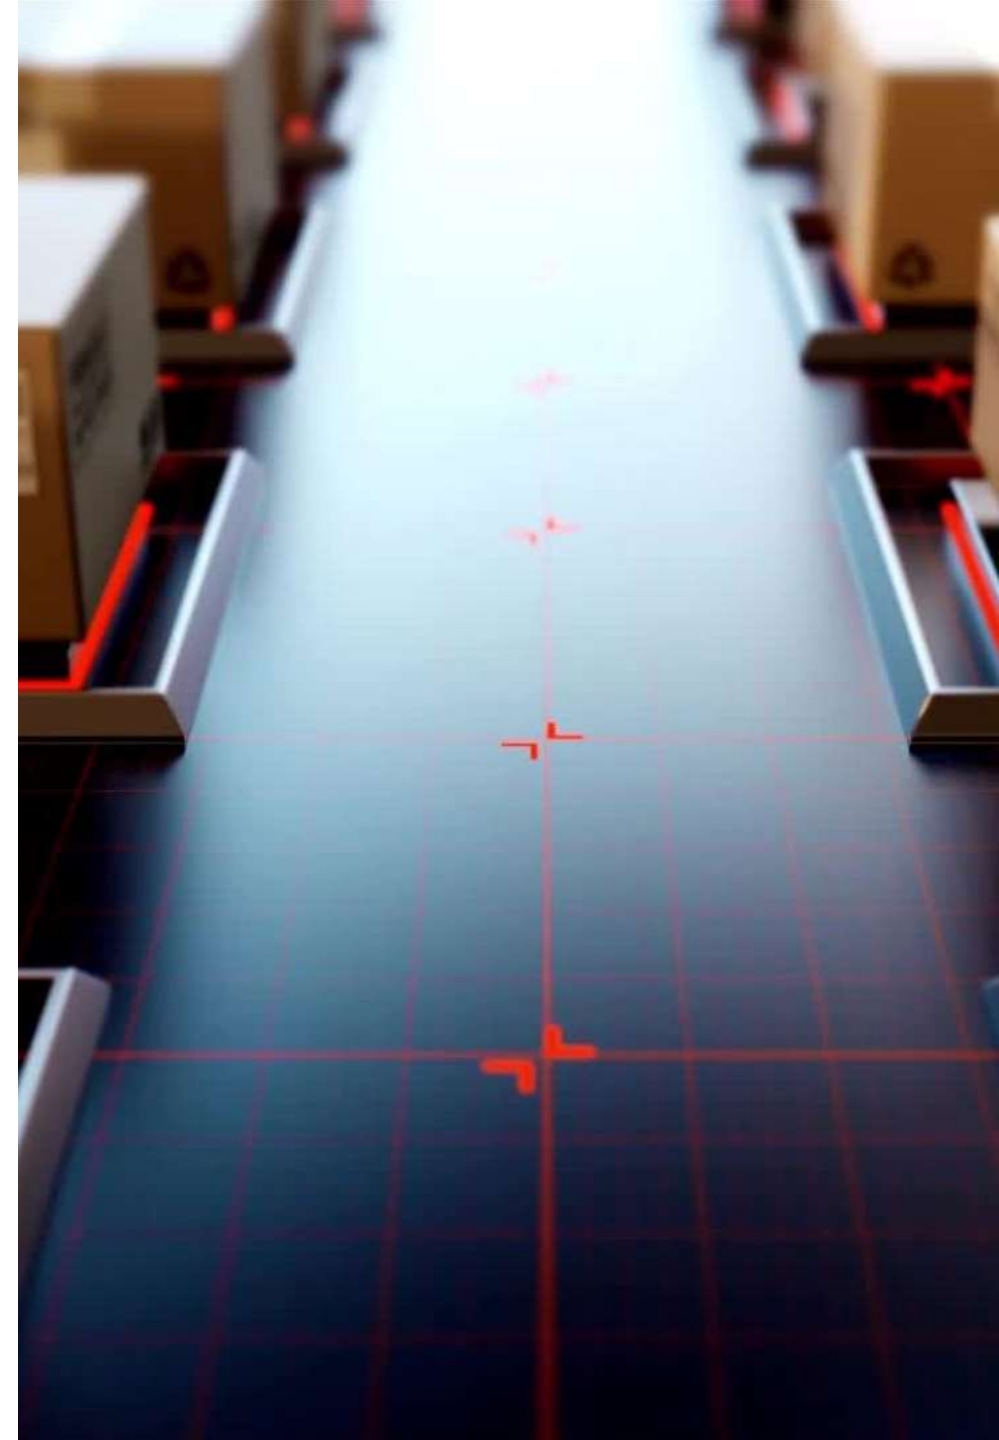

```
cd test
```

```
code .
```

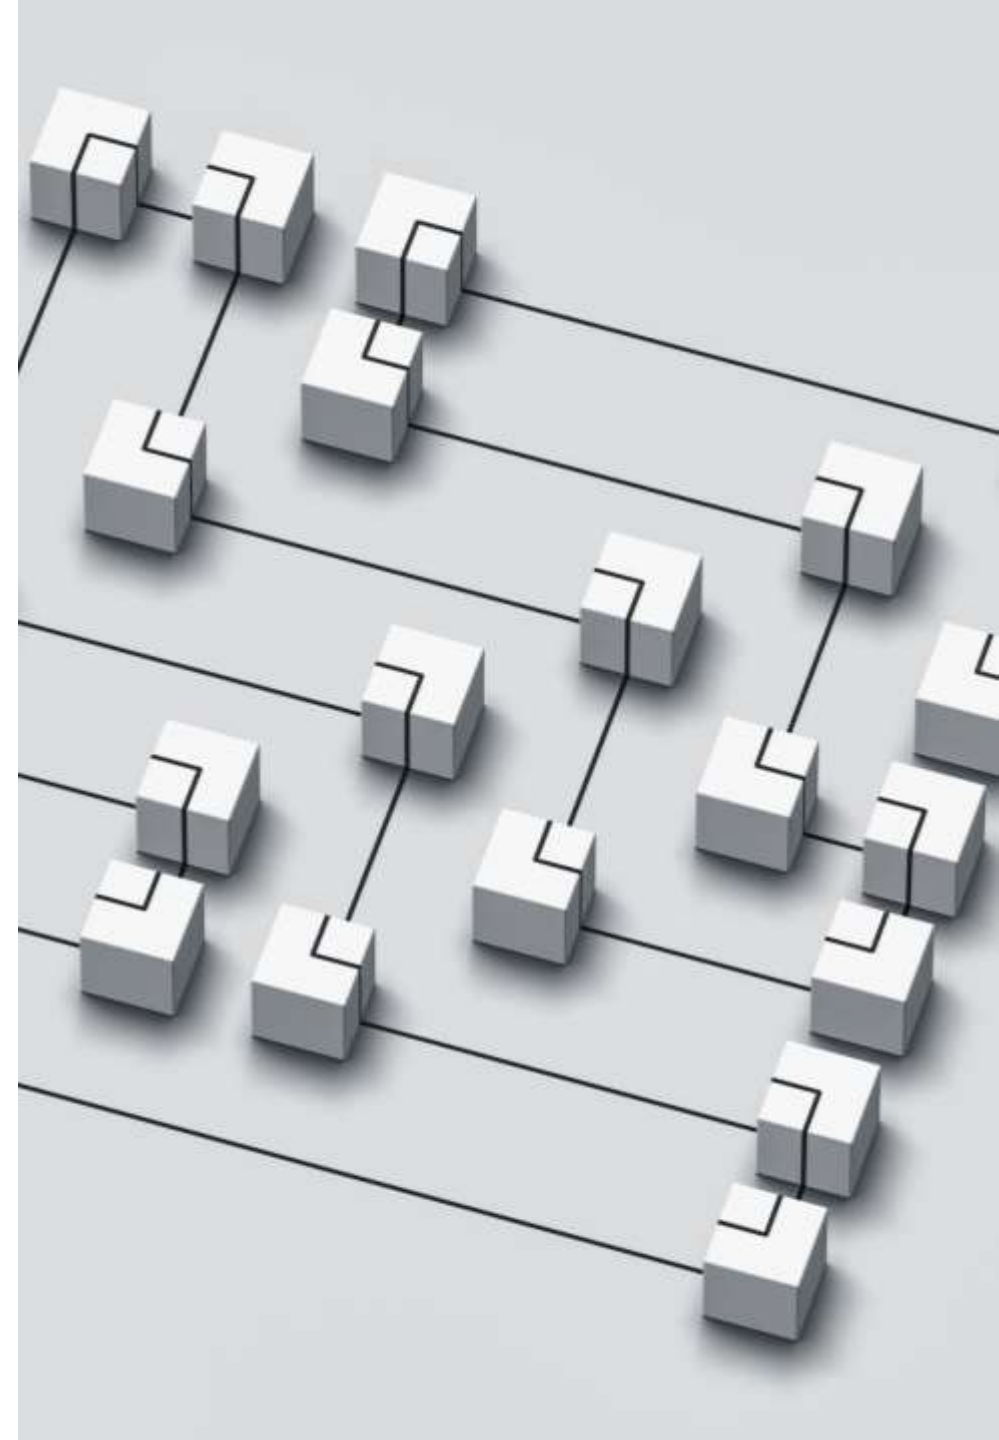

## INSTALATION STEP 3

- open terminal and type following command
- `npm start`
- open browser and type `http://localhost:3000` your project show

## INSTALLATION STEP 4

- you want to push your react project code on GitHub then
- 1. go to your github account and create new repository
- 2. copy that repository path
- 3. close your react app terminal use ( `ctrl + c` )
- 4. initialize your github repository

---

# GITHUB

- `git init`
- after that you add all folders for that use command
- 
- `git add .`
- to commit changes on github repository you need to following command s
- `git commit -m "first-code-change"`
- `git push` paste your copy repository path

---

To clone from github you have  
to use following command

```
git clone  
https://github.com/Kushal-  
Kamble/react-project.git
```

- `cd` = change directory
- `cd ..` => one step directory path back
- `cd ../..` => two step directory path back
- `cd folder name` => u go to that folder directory
- `cmd` => command line interface
- `node src/B.js`
